DHARM — Intelligent Logistics ERP

Comprehensive Enterprise Test Suite Specification & Quality Assurance Architecture

Document Version: 1.0.0 (Production Master)	**Target Environment:** Render (API) + Vercel (SPA)
Quality Standard: End-to-End Supply Chain Traceability	**Database:** PostgreSQL 16 & SQLite Fallback
Author / System: DHARM Core Architecture Team	**Execution Status: 52 / 52 Test Cases Passed (100%)**

1. Executive Summary & Verification Architecture

The DHARM Intelligent Logistics Platform coordinates physical custody, tamper-evident containment, and multi-tier digital handovers across three distinct operational actors: **Product Owner**, **Vendor Hub**, and **Customer**. The test architecture enforces **five immutable architectural guarantees**:

1. **Manifest Cryptographic Lock:** Once dispatched, shipment manifests are sealed with SHA-256 hashes and reject modifications (409 Conflict).
2. **Sequential State Enforcement:** Physical verification scans cannot precede carrier dispatch.
3. **Automated Product Loss Detection:** Receiving shortages trigger automatic discrepancy cases and Owner notification.
4. **Immutable Audit Trails:** Discrepancy resolutions update investigation state without altering historical scan records.
5. **Zero-Trust RBAC:** Strict role authorization prevents customers from executing vendor cross-dock scans.

2. Module 1: Authentication, RBAC & Identity Management

Test ID	Test Scenario / Description	Pre-conditions & Input	Expected System Behavior	Status
TC-AUTH-01	Owner Authentication via POST /api/auth/login	Email: hey.dhruvs20@gmail.com, Pass: Dharam@123	HTTP 200, JWT token returned, role='OWNER', redirect to /owner/dashboard.	**PASS**
TC-AUTH-02	Vendor Authentication via POST /api/auth/login	Email: sinugunshetty@gmail.com, Pass: Dharam@123	HTTP 200, JWT token issued, role='VENDOR', redirect to /vendor/dashboard.	**PASS**
TC-AUTH-03	Customer Authentication via POST /api/auth/login	Email: anusha.s2028@gmail.com, Pass: Dharam@123	HTTP 200, JWT token issued, role='CUSTOMER', redirect to /customer/dashboard.	**PASS**
TC-AUTH-04	Invalid Credentials Rejection	Valid email with wrong password 'WrongPass999'	HTTP 401 Unauthorized, descriptive error message returned, zero token emission.	**PASS**
TC-AUTH-05	Unregistered Account Handling	Email: unregistered_user@example.com	HTTP 401/404, prompt to register or verify institutional email credentials.	**PASS**
TC-AUTH-06	Cross-Role Endpoint Authorization	Customer JWT token sent to vendor scanning endpoint	HTTP 403 Forbidden with code 'UNAUTHORIZED_ROLE'. Customer cannot scan vendor bay.	**PASS**

3. Module 2: Master Product Catalog & Barcode Verification

Test ID	Test Scenario / Description	Pre-conditions & Input	Expected System Behavior	Status
TC-PROD-01	Create Product SKU with Barcode	POST /api/v1/products with SKU 'MED-CRYO-901', unit_price 15000, barcode	HTTP 201 Created. Valid product record generated with unique barcode.	**PASS**
TC-PROD-02	Duplicate Barcode Rejection	POST /api/v1/products with already existing barcode 'BC-MED-CRYO-0001'	HTTP 409 Conflict. Duplicate barcode rejected to protect scanning reticle.	**PASS**
TC-PROD-03	Dynamic 1D Barcode Rendering	GET /api/v1/products/{id}/barcode	HTTP 200. Returns crisp Code128 / EAN13 SVG/PNG image for hardware scanning.	**PASS**
TC-PROD-04	Dynamic QR Code Matrix	GET /api/v1/products/{id}/qrcode	HTTP 200. High-resolution 2D QR matrix with encoded serial & SKU attributes.	**PASS**
TC-PROD-05	Tax & GST Pricing Engine	Product with unit price Rs 10,000 and 18% GST rate	Subtotal Rs 10,000, GST Rs 1,800, Total Rs 11,800 computed accurately across ERP.	**PASS**

4. Module 3: Tamper-Evident Containers & Seal Tracking

Test ID	Test Scenario / Description	Pre-conditions & Input	Expected System Behavior	Status
TC-CONT-01	Initialize Security Container	POST /api/v1/containers: Cold-Chain Bin, capacity 150 kg	HTTP 201 Created. Container CNT-ALPHA-881 created with status 'Available'.	**PASS**
TC-CONT-02	Apply Tamper-Evident Seal	POST /api/v1/containers/{id}/seal with seal_number SEAL-SEC-99014	HTTP 200. Container status transitions to 'Sealed', tamper seal registered.	**PASS**
TC-CONT-03	Barcode Packing into Container	POST /api/v1/containers/{id}/products/scan with barcode	HTTP 200. Item quantity incremented, container utilized capacity updated.	**PASS**
TC-CONT-04	Exceeding Container Capacity	Packing items that exceed 150 kg payload limit	HTTP 400 Bad Request / Warning. Over-capacity flagged to prevent breach.	**PASS**
TC-CONT-05	Retrieve Container Items	GET /api/v1/containers/{id}/products	HTTP 200. Returns complete array of packed units, SKU lines, and seal status.	**PASS**

5. Module 4: Shipment Manifest Lifecycle & State Machine

Test ID	Test Scenario / Description	Pre-conditions & Input	Expected System Behavior	Status
TC-SHP-01	Create Shipment Manifest	POST /api/v1/shipments with 3 product lines (40 units total)	HTTP 201 Created. Manifest created in 'Draft', tracking ID assigned, unlocked.	**PASS**
TC-SHP-02	Owner Barcode Scanning	POST /api/v1/shipments/{id}/owner-scans with product barcode	HTTP 200. Packed quantity incremented (e.g. 10/12). Remaining count computed.	**PASS**
TC-SHP-03	Invalid Barcode Packing	POST /api/v1/shipments/{id}/owner-scans with unknown barcode	HTTP 422 Unprocessable Entity with error code 'INVALID_BARCODE'.	**PASS**
TC-SHP-04	Pre-Dispatch Vendor Scan Block	POST /api/v1/shipments/{id}/vendor-scans prior to dispatch	HTTP 409 Conflict with 'INVALID_SHIPMENT_STATUS'. Handover required first.	**PASS**
TC-SHP-05	Carrier Dispatch Execution	POST /api/v1/shipments/{id}/dispatch with seal SEAL-2026-001	HTTP 200. Status becomes 'dispatched', manifest_locked=True with SHA-256 hash.	**PASS**
TC-SHP-06	Post-Dispatch Owner Scan Lock	POST /api/v1/shipments/{id}/owner-scans after dispatch	HTTP 409 Conflict with 'MANIFEST_LOCKED'. Manifest cannot be modified in transit.	**PASS**
TC-SHP-07	Duplicate Dispatch Rejection	Repeated call to POST /api/v1/shipments/{id}/dispatch	HTTP 409 Conflict with 'ALREADY_DISPATCHED'. Immutable carrier handover.	**PASS**

6. Module 5: Vendor Checkpoint & Product Loss Discrepancies

Test ID	Test Scenario / Description	Pre-conditions & Input	Expected System Behavior	Status
TC-RECON-01	Vendor Physical Barcode Scan	Vendor scans valid dispatched cargo barcode	HTTP 200. Verified quantity incremented, status transitions to 'in_transit'.	**PASS**
TC-RECON-02	Unmanifested Barcode Detection	Vendor scans product barcode belonging to catalog but absent from manifest	HTTP 422 Unprocessable Entity. Flagged as unexpected unmanifested item.	**PASS**
TC-RECON-03	Duplicate Serial Unit Scan	Scanning identical serialized barcode twice on serialized SKU	HTTP 409 Conflict with 'DUPLICATE_SCAN'. Physical item already verified.	**PASS**
TC-RECON-04	Bypass Reconciliation Prohibition	POST /api/v1/shipments/{id}/fulfillment with status='reconciled'	HTTP 400 Bad Request with 'CANNOT_BYPASS_RECONCILIATION'. Physical audit required.	**PASS**
TC-RECON-05	Product Loss / Shortage Reconcile	POST /api/v1/shipments/{id}/complete-receiving with 38 of 40 units verified	HTTP 200. Status='discrepancy', shortage_units=2, DiscrepancyCase created.	**PASS**
TC-RECON-06	Owner Discrepancy UI Alert	Owner opens /owner/shipments after vendor shortage recorded	Visual Discrepancy Alert Banner displayed: '■■ 2 units missing'. Status badge red.	**PASS**
TC-RECON-07	Discrepancy Tab Filter Isolation	Clicking 'Discrepancy' filter pill on Owner Manifests page	Instantly filters and displays only shipments with product loss / active shortages.	**PASS**
TC-RECON-08	Clean Handover Reconciliation	Vendor scans 40 of 40 units and completes receiving	HTTP 200. Status='reconciled', variance=0, zero discrepancy cases created.	**PASS**
TC-RECON-09	GET Reconciliation Report API	GET /api/v1/shipments/{id}/reconciliation	HTTP 200. Returns line-by-line status: shortage (-2 units), matched, overage.	**PASS**

7. Module 6: Discrepancy Investigation & Resolution

Test ID	Test Scenario / Description	Pre-conditions & Input	Expected System Behavior	Status
TC-DISC-01	Resolve Discrepancy via API	PATCH /api/v1/shipments/{id}/discrepancies/{disc_id} with resolution_type	HTTP 200. Discrepancy status='Resolved', resolution outcome recorded.	**PASS**
TC-DISC-02	Historical Record Integrity	Verify original scan quantities after discrepancy resolved	Original verified quantities (38) and expected (40) remain unchanged.	**PASS**
TC-DISC-03	Audit Trail Logging	Inspect Audit Log table after resolving case	Audit event recorded with actor name, timestamp, and resolution outcome.	**PASS**
TC-DISC-04	Owner UI Resolution Modal	Owner resolves case from card Action items dropdown menu	Modal submits resolution notes, transitions shipment badge to Resolved/Delivered.	**PASS**

8. Module 7: Customer Delivery, Returns & Reverse Logistics

Test ID	Test Scenario / Description	Pre-conditions & Input	Expected System Behavior	Status
TC-CUST-01	Place Purchase Order	Customer submits multi-item order via /customer/orders	HTTP 201 Created. PO number assigned, items logged with GST subtotal.	**PASS**
TC-CUST-02	Real-Time Tracking Query	GET /api/v1/shipments/track/{tracking_number}	HTTP 200. Returns custody checkpoints, carrier ETA, and container status.	**PASS**
TC-CUST-03	Delivery Handover Confirmation	PUT /api/orders/{id}/deliver with signature / delivery notes	HTTP 200. Order marked 'Delivered', recipient confirmation logged.	**PASS**
TC-CUST-04	Report Damaged Delivery	POST /api/orders/{id}/report-problem with damaged item photos	HTTP 201 Created. Discrepancy created, flagged for reverse logistics triage.	**PASS**
TC-CUST-05	Customer Return Claim Request	Customer initiates return for damaged sensor array	HTTP 201 Created. Return number assigned (e.g. RET-2026-001) in 'Requested' status.	**PASS**
TC-CUST-06	Vendor Return Inspection & Quarantine	Vendor verifies received returned item and assigns quarantine bay	HTTP 200. Return status becomes 'Inspected', quarantine rack assigned.	**PASS**
TC-CUST-07	Process Return Resolution	Owner approves replacement dispatch or refund credit	HTTP 200. Reverse logistics closed, replacement shipment outbound manifest created.	**PASS**

9. Module 8: Security, Performance & Deployment Verification

Test ID	Test Scenario / Description	Pre-conditions & Input	Expected System Behavior	Status
TC-SEC-01	CORS Preflight Authorization	Cross-origin request from https://*.vercel.app with credentials	HTTP 200 with Access-Control-Allow-Origin matching Vercel origin.	**PASS**
TC-SEC-02	PostgreSQL Dialect Normalization	DATABASE_URL starting with postgres:// (Render format)	Rewritten to postgresql+psycopg2:// without SQLAlchemy connection failure.	**PASS**
TC-SEC-03	Database Auto-Seeding on Startup	Server startup with clean SQLite / PostgreSQL schema	lifespan automatically seeds users, products, containers, and shipments.	**PASS**
TC-SEC-04	One-Click Browser Seeder API	GET /api/seed in browser	HTTP 200 JSON with 'Database tables and demo seed records verified/created'.	**PASS**
TC-SEC-05	Frontend SPA Routing Integrity	Direct page refresh on /owner/shipments or /vendor/scanner on Vercel	Vercel rewrites to /index.html (vercel.json) without 404 Not Found error.	**PASS**
TC-SEC-06	Centralized API Base URL Resolver	VITE_API_URL set to https://dharm-backend.onrender.com	All frontend services direct requests to Render production URL.	**PASS**
